PROFILE

Java Backend Developer with 2+ years of experience building secure, scalable, and reliable backend applications. Strong hands-on experience with **Java, Spring Boot, Spring Security, JWT, REST APIs, JDBC, Oracle, and PostgreSQL**. Experienced in developing backend services, authentication and authorization, secure API integrations, encryption, transaction processing, schedulers, and database operations. Hands-on experience with **Microservices, Spring Cloud, Kafka, Docker, OpenFeign, Eureka, API Gateway, Config Server, and Zipkin** through personal projects. Currently expanding into **full-stack development with React.js**.

SKILLS

Languages: Java, SQL

Backend: Spring Boot, Spring Security, REST APIs, JDBC, JPA/Hibernate, Java Servlets

Security: JWT, OAuth2, Role-Based Authorization, AES Encryption, Public-Key Encryption, Digital Signatures, API Key

Microservices: Spring Cloud, Eureka, API Gateway, Config Server, OpenFeign, Apache Kafka, Zipkin

Frontend: HTML, CSS, JavaScript, React.js

Databases: Oracle, PostgreSQL

Tools: Git, Maven, Postman, Docker, IntelliJ IDEA, Eclipse, VS Code

PROFESSIONAL EXPERIENCE

Yalamanchili Solution for Payment

Chennai, India

Junior Java Developer

JUN 2024 – Present

- Develop secure REST APIs using Java and Spring Boot for banking and payment applications.
- Implement authentication and authorization using Spring Security, JWT, client credentials, roles, and authorities.
- Integrate backend services with external bank APIs for fund transfers, payment inquiry, card services, and customer onboarding.
- Secure API communication using AES encryption, public-key encryption, digital signatures, and API key authentication.
- Work with Oracle databases using JDBC for transaction processing, card data, validations, and status updates.
- Troubleshoot API integration, transaction processing, authentication, and production issues while improving application reliability.
- Managed source code using Git for version control, branching, and code maintenance.

PROFESSIONAL PROJECTS

Superb Prepaid Cards

SEP 2024 – Present

Backend payment application for secure fund transfers and NEFT through bank API integrations.

- Developed a scheduler to fetch pending transactions and initiate NEFT transfers through bank APIs.
- Built REST APIs for fund transfers, payment inquiry, transaction validation, response handling, and status updates.
- Implemented token-based authentication by integrating with the bank's token API before payment and inquiry requests.
- Implemented AES encryption and API key authentication for secure bank API communication.
- Performed Oracle database operations using JDBC and resolved transaction/API integration issues.

Technologies: Java, Spring Boot, REST APIs, JDBC, Oracle, AES, API Key Authentication, Scheduler

CUB Credit Card

JAN 2026 – Present

Secure backend credit card service providing card information and transaction-related services through authenticated APIs.

- Developed REST APIs for card details, transaction limits, statements, history, and CVV retrieval.
- Implemented client authentication using Client ID, Client Secret, and Client Role, followed by JWT generation with identity and role claims.
- Implemented JWT validation and role-based authorization using Spring Security.
- Built two-way secure API communication using public-key encryption and digital signatures.
- Verified signed requests, decrypted incoming payloads, and encrypted/signed API responses using client/application key pairs.

Technologies: Java, Spring Boot, Spring Security, JWT, REST APIs, JDBC, Oracle, Public-Key Encryption, Digital Signatures, Role-Based Access Control (RBAC)

IDBI Credit Card

JUN 2026 – Present

Secure credit card onboarding backend integrated with Perfios and Wimbo for customer onboarding, verification, and communication.

- Developed REST APIs for credit card onboarding, D-Dupe verification, and card creation.
- Implemented client authentication, JWT-based authorization, and role-based access control.
- Developed D-Dupe validation using customer PAN to identify existing credit cards and return relevant card details.
- Integrated backend services with CMS for downstream card creation and with Wimbo for secure customer-detail retrieval and email communication.
- Implemented encrypted and digitally signed request/response processing using public/private key pairs.

Technologies: Java, Spring Boot, Spring Security, JWT, REST APIs, JDBC, Oracle, Public-Key Encryption, Digital Signatures, Role-Based Access Control (RBAC)

PERSONAL PROJECTS

E-Commerce Microservices

Microservices-based e-commerce system exploring service discovery, centralized configuration, inter-service communication, asynchronous messaging, distributed tracing, and containerization.

Technologies: Java, Spring Boot, Spring Cloud, Microservices, Eureka, API Gateway, Config Server, OpenFeign, Apache Kafka, Zipkin, Docker, PostgreSQL.

GitHub: github.com/Sahil-Arsalan/e-commerce-app/tree/dev

Hospital Management System

Backend application exploring authentication and authorization using Spring Security, JWT, OAuth2, and Role-Based Access Control (RBAC)

Technologies: Java, Spring Boot, Spring Security, JWT, OAuth2, REST APIs, Role-Based Access Control (RBAC)

GitHub: github.com/Sahil-Arsalan/hospital-management-system

EDUCATION

Marwari College (Ranchi University)

Ranchi, India

Bachelor of Science in Information Technology

2019 – 2022

- Relevant Coursework: Object-Oriented Programming (Java), Data Structures & Algorithms, Database Management Systems, Web Development.
